

Look at the next slide

What is it?

# Difference Engine

**Charles Babbage**

**1820s**

The Difference Engine was a very clever calculator and seen by many as one of the first computers.

Look how big it is. Today, a computer smaller than your fingernail could do everything the Difference Engine could do and do it more quickly.

And do many other things as well.

# Monday Assemblies Spring Term 2021

## Computing

Monday 22<sup>nd</sup> February 2021

# Note to Parents

During Lockdown I will be holding zoom assemblies for the children in school.

My Monday assembly is our thinking assembly.

I don't want the children at home to miss out.

So this term I will post my Monday assemblies on Parentmail.

I normally use powerpoints to give the children visual prompts.

I will add a brief script to the powerpoints so that children at home can engage with them too.

You may need to read the slides to your child.

Hopefully you will find the assemblies of interest too and chat with your child(ren) about them.

As I am sending you a powerpoint you can hold your assembly at a time convenient to you.

Learning comes on leaps and bounds using computers

The following photos show children using computers.

Look at the photos carefully.  
Remember when you were using these programmes.

What skills are the children using?

Make a list.

[illegible]

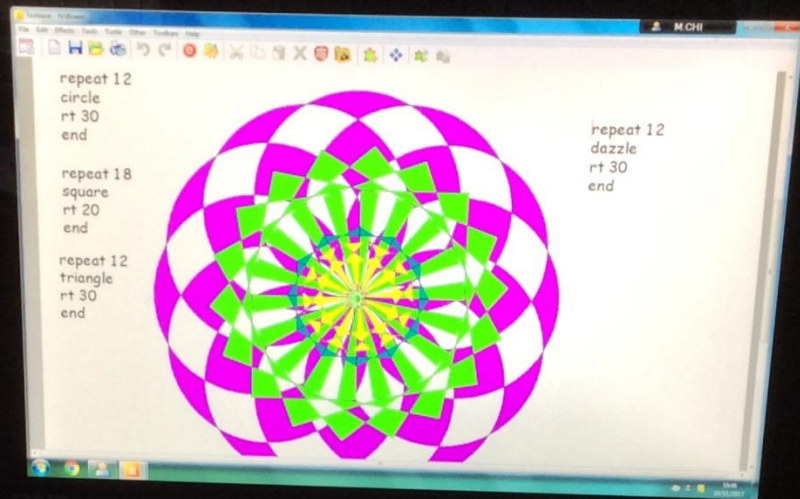

# Something remarkable happened

As you are taught more skills, you develop the skills to program and design.

Over the past three years, Mrs. Walker has given some of our Year 6s the opportunity to test their computing skills in competition.

# And were they good!

They won awards in local, national and international competitions.

They have gone on to excel in computing in their secondary schools.

The following photos celebrate their success.

[Parents, I have attached another ppt which tells the photo-story in detail of our 2020 award winning teams.]

# Before

After

Look carefully- what awards did they win?

# 2019 Team making friends in Kentucky, USA at the world finals

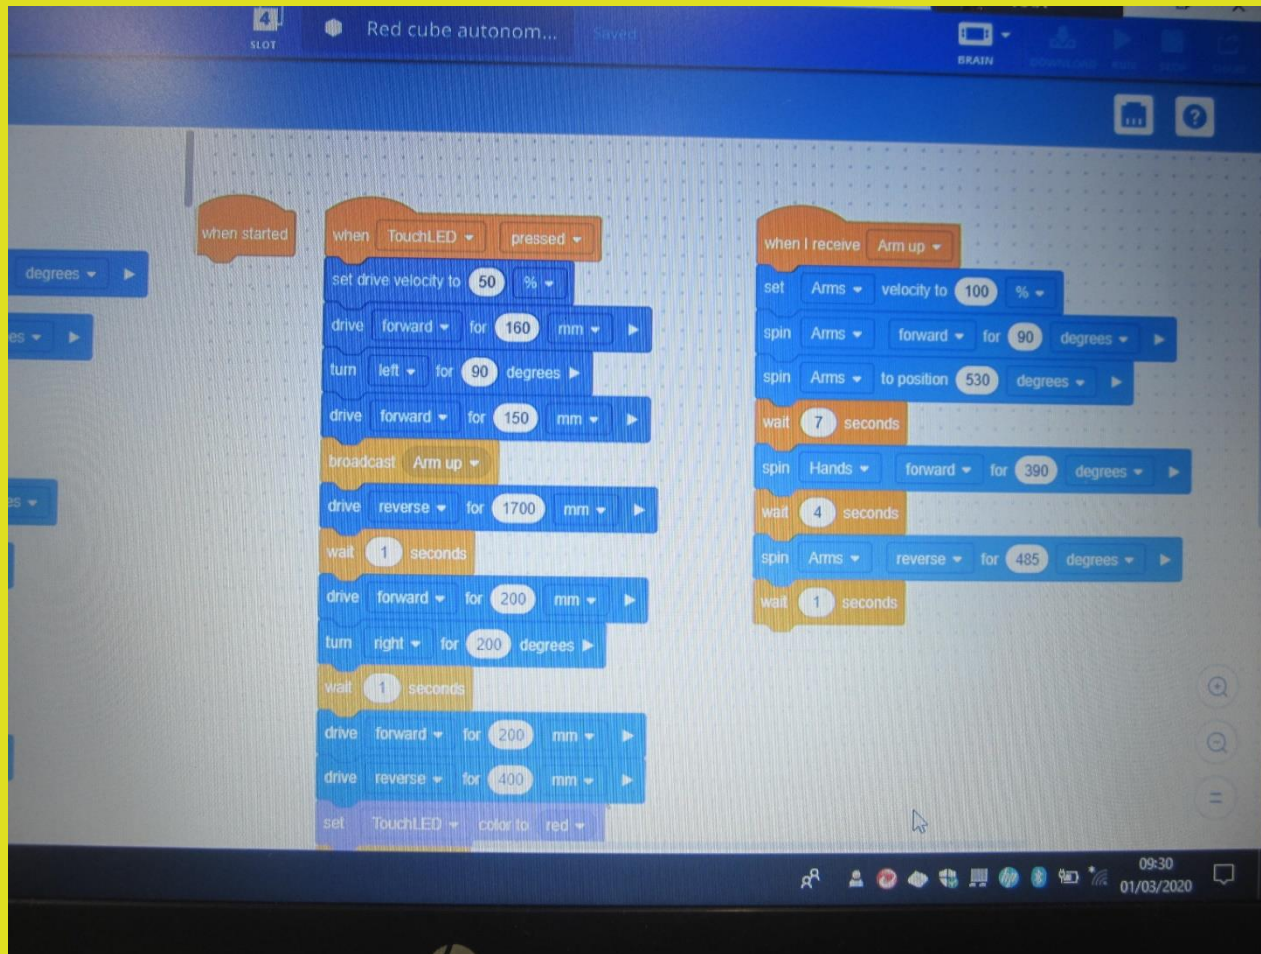

Could you design, build and programme this robot?

# Computer Programming

The drama and excitement of competition is incredible

# It begins in Foundation

**Controlling the Bee Bot...**

**Can lead to this.**

# So, what are you waiting for?

Explore all the possibilities of computers

Take control

Get coding

Get programming

Thank you for listening to my assembly.

**Goodbye**

Work Hard.

Play nicely.

Be kind one to another.

Have a good week.
